

NAAN MUDHALVAN ARTS INTERNSHIP PROGRAM 2026

Frontend Web Development using React

Project Submission Template

STUDENT NAME: UMA MAHESWARI S

YEAR: II

COLLEGE CODE: BRUAG

COLLEGE NAME: SRI KRISHNA ADITHYA COLLEGE OF ARTS AND SCIENCE

DEPARTMENT: B.SC INFORMATION TECHNOLOGY

SEMESTER: V

ROLL NO: 2426J0453

NMID: B98D4E0D97F28A49ECC49618C022ACF0

DATE: 18/06/2026

TITLE: COLLEGE ASSIGNMENT SUBMISSION TRACKER

GITHUB LINK : <https://github.com/24bsit161umamaheswaris-boop/>

1. ABSTRACT

The College Assignment Submission Tracker is a web-based application developed to simplify the process of managing assignment submissions across multiple subjects. The system allows faculty members to create assignments, set due dates, monitor submission status, and identify pending or late submissions. Students can view assignments and track their submission progress. The application provides an organized dashboard that improves assignment management, reduces manual tracking efforts, and ensures timely submission monitoring. Developed using React and modern frontend technologies, the system offers an interactive and user-friendly experience.

2. PROBLEM STATEMENT

In many colleges, assignment tracking is managed manually through spreadsheets, emails, or paper records. This makes it difficult for faculty to monitor submissions, identify late submissions, and generate reports efficiently. Students may also miss deadlines due to a lack of centralized assignment information. Therefore, there is a need for a digital solution that helps faculty and students manage assignments effectively and improve academic workflow.

3. OBJECTIVES

- To develop a user-friendly assignment tracking system.
- To allow faculty members to create and manage assignments.
- To display assignment details including subject and due date.
- To track submitted, pending, and late assignments.
- To provide assignment status updates in real time.
- To reduce manual effort in assignment monitoring.
- To improve communication between faculty and students.

4. PROJECT SCOPE

The College Assignment Submission Tracker is designed to simplify the management of assignment submissions within a college environment. The application enables faculty members to create assignments, set due dates, and monitor the submission status of students. It provides features to view submitted, pending, and late assignments through an organized dashboard. The system offers a user-friendly interface that helps reduce manual effort and improves the efficiency of assignment tracking. The current scope focuses on frontend development using React, with data managed within the application state. Future enhancements may include user authentication, database integration, file upload functionality, automated notifications, and report generation to make the system more comprehensive and scalable.

5. TECHNOLOGIES USED

- React
- JavaScript (ES6+)
- HTML5
- CSS3
- React Hooks (useState, useEffect)
- Visual Studio Code
- Git and GitHub
- Node Package Manager (NPM)

6. APPLICATION FLOW

- Faculty opens the Assignment Submission Tracker dashboard.
- Faculty creates a new assignment by entering title, subject, and due date.
- The assignment is added to the assignment list.
- Students view available assignments.
- Students mark assignments as submitted.
- The system updates the submission status automatically.
- Pending and late assignments are highlighted.
- Faculty can monitor submission progress through the dashboard.
- Assignment records are updated in real time.

7. KEY REACT CONCEPTS USED

- Components
- Reusable React components are used for assignment forms, assignment lists, and dashboard sections.
- useState Hook
- Used to manage:
 - Assignment details
 - Submission status
 - Assignment lists
- useEffect Hook
- Used for updating assignment status and monitoring due dates.
- Event Handling
 - Handles user actions such as adding assignments and updating submission status.
- Conditional Rendering
 - Displays Submitted, Pending, and Late statuses dynamically.
- List Rendering

Used to display multiple assignments efficiently using arrays and map().

8.EXPECTED OUTPUT

College Assignment Submission Tracker

Add New Assignment

Assignment Title

Subject

Due Date

+ Add Assignment

Assignment List

Title	Subject	Due Date	Status	Action
DBMS Assignment	Database Management Systems	26/05/2025	Pending	Submit
React Project	Web Development	30/05/2025	Submitted	—
Python Lab Report	Python Programming	20/05/2025	Submitted	—
OS Assignment	Operating Systems	18/05/2025	Late	Submit
DSA Assignment	Data Structures	28/05/2025	Pending	Submit

Total Assignments
5

Submitted
2

Pending
2

Late
1

The application provides an interactive dashboard where users can:

- Add new assignments
- View assignment details
- Monitor submitted assignments
- View pending assignments
- Identify late submissions
- Track assignment progress

9. CHALLENGES FACED

- Managing assignment status dynamically.
- Tracking due dates accurately.
- Implementing filtering for submitted and pending assignments.
- Maintaining application state efficiently.
- Designing a responsive and user-friendly interface. These challenges were resolved using React Hooks, component-based architecture, and efficient state management techniques.

10. LEARNING OUTCOMES

- Through this project, the following skills were gained:
- Understanding React component architecture.
- Managing state using React Hooks.
- Creating dynamic user interfaces.
- Handling forms and user inputs.
- Implementing conditional rendering.
- Working with JavaScript arrays and objects.
- Using GitHub for version control.
- Developing responsive web applications.

11. CONCLUSION

The College Assignment Submission Tracker successfully simplifies assignment management by providing a centralized platform for tracking submissions. The system helps faculty monitor student progress, identify pending and late assignments, and improve academic efficiency. The project demonstrates the practical implementation of React concepts and modern web development practices. With future enhancements such as database integration and authentication, the application can evolve into a complete academic assignment management system.
